AVFAB AIRLINE STYLE SEATS APPROVED FOR ALL KING AIR MODELS

Clinton, MO – April 16, 2013 – Aviation Fabricators (AvFab) recently received final Transport Canada approval for their Airline Style Seating for King Air Models 300/350. The Airline Style Seats are now approved in Canada for all King Air Models.

The value-oriented Airline Style Seating options were designed for high density applications, and are available in two models, Econo Seat and Traveler Seat. Both options also have FAA and EASA STC Approval.

The Econo Seat was the first to be engineered for durability and affordability. Weighing approximately 23 lbs., it's a lightweight and "no maintenance" solution for those wanting to add capacity without adding unnecessary cost. The Traveler Seat builds on the quality and durability of the Econo while adding some additional features including more legroom, easier entry and exit, and improved comfort. These features were all incorporated without an increase in weight.

The seats are also available in a "Narrow Back" version allowing installation in a later model B200/B200GT or 350 King Air, without removing the arm ledges from the sidewall.

All Airline Style Seating kits include seat belts, foam backs and bottoms (un-upholstered), track fittings, life vest, and installation instructions. Add-on options include aisle-side arm rest, headrest, and side wall/arm ledge panel for outboard armrest. The seats come with a one-year warranty.

Installation is as simple as removing the existing seats/furnishings, and then placing the high-density seating into the desired locations by locking them into the seat tracks. AvFab also offers pricing quotes on the removed seats as potential trade-ins.

AvFab provides inspection, repair, and overhaul of corporate aircraft interior components, and is also an FAA-PMA producer of custom aircraft seating. AvFab's sister company, Central Airmotive, is a comprehensive supplier of Original Equipment Manufacturer interior products such as seats, divans, tables, toilets, cabinets and dividers. Central Airmotive currently has over 90,000 sq. ft. of OEM seats and cabin components. Together they represent a "one-source" solution to any corporate aircraft interior need.
