

**Eastman Aviation Solutions to Distribute Complimentary
Turbine-Engined Fleet Guide**

2014 *Turbine-Engined Fleets of the World's Airlines* guide now available for ordering.

Kingsport, TN, August 15, 2014 – Eastman Aviation Solutions announced it will release a comprehensive, up-to-date guide of the world's turbine-engine aviation fleets this month. Individuals can now preorder a free copy online.

The *Turbine-Engined Fleets of the World's Airlines* guide has been produced every year since 1970 for customers of BPTO 2197, BPTO 2380 and the other Turbo Oils now offered by Eastman Aviation Solutions. The guide is made available to members of the aviation community on request. Eastman Chemical Company acquired the aviation turbo oils business from BP on June 1, 2014, and this year's guide is the first to be published by Eastman.

The guide is based on data collected from an annual survey of the world's airlines, and is the only free, in-depth listing of the 57,000 turbine-engine equipped aircraft flying commercially today. This unique fleet guide is meant to be a valuable and useful resource throughout the year to professionals in the industry.

The *Turbine-Engined Fleets of the World's Airlines* guide has been used to pinpoint emerging trends and transitions within the airline industry through documented changes in the survey data. In recent years, the guide identified the substantial increase in the number of aircraft transitioning from standard engine oils to cleaner and more efficient options.

“Eastman's products, such as Skydrol® aviation hydraulic fluids, are already known for being high quality, so we are thrilled to bring that product together with BP turbo oils, and SkyKleen® aviation solvents to form Eastman Aviation Solutions™,” says Matthew Stockum, Business Unit Manager, Eastman Aviation Solutions. “Eastman is also known for our technical expertise and superior customer service, so continuing the longstanding tradition of distributing the guide was an important objective for us.”

(more)

“We want to assure our customers that all of the products offered under the Eastman Aviation Solutions brand are indeed the same products they know and trust, and our new team will allow for even more improved product and service offerings to our customers,” says Rodger Harris, Global Commercial Director, Eastman Aviation Solutions. “The 2014 turbine-engined fleet guide is just one such offering.”

About Eastman Chemical Company

Eastman is a global specialty chemical company that produces a broad range of products found in items people use every day. With a portfolio of specialty businesses, Eastman works with customers to deliver innovative products and solutions while maintaining a commitment to safety and sustainability. Its market-driven approaches take advantage of world-class technology platforms and leading positions in attractive end-markets such as transportation, building and construction, and consumables. In 2014, Eastman integrated their brands Skydrol® aviation hydraulic fluids and SkyKleen® aviation solvents with BP turbo oils bringing them under one brand, Eastman Aviation Solutions™, combining over a century of experience in aviation fluids. With the technical and commercial organization to support the new brand, the new team provides industry-leading products, technical resources, dedicated support and improved service to aviation customers. Eastman focuses on creating consistent, superior value for all stakeholders. As a globally diverse company, Eastman serves customers in approximately 100 countries and had 2012 pro forma combined revenues, giving effect to the Solutia acquisition, of approximately \$9.1 billion. The company is headquartered in Kingsport, Tenn., USA, and employs approximately 14,000 people around the world. For more information about Eastman, visit www.eastman.com.
